## Acknowledgements

The Michigan State University Community and Economic Development Program (MSU-CEDP), host of the University Center program, has over 30 years of experience in addressing the economic problems of communities throughout Michigan. Strong private, state and local partnerships have been developed over these years, having resulted in the collaborative identification of needs, and implementation of strategies. These partnership strategies have enabled the MSU-CEDP EDA University Center to build the capacity of organizations throughout the state. Through research, technical assistance, and education, the MSU-CEDP EDA University Center assists in developing innovative strategies that are effective in overcoming the barriers to higher-skilled higher-wage jobs, developing successful local economic development strategies which result in the creation of new businesses or jobs in their communities.

The MSU-CEDP EDA University Center seeks to improve the capacity of local economic development agencies and public and private organizations to promote favorable economic conditions. This is accomplished through the cultivation and channeling of resources available through a variety of colleges, departments, and programs at the university. The objectives include targeted technical assistance, training, public policy development for economic development, further applied research, outreach, and dissemination of information.

This research project is the result of the talents of many individuals who have contributed to this work. Contributors to data collection, analysis and presentation include several colleagues from Michigan State University including, Thomas Adelaar, Micheal Hicks, Alexander Jung, Dr. Jongyeul Moon, Olatunbosun Williams, Karan Sighn and Seth Shpargel. We would also like to thank Mary Cotton and Cassandra Ray-Smith for their assistance.

Special thanks are due to our research team colleagues Dr. Kenneth E. Corey and Dr. Mark Wilson for their guidance throughout the conception and implementation of this research project.

While several individuals contributed to this concept, the product presented in the following pages is the direct effort of the following key authors: Kyle Wilkes, Faron Supanich-Goldner, John Melcher and Dr. Rex LaMore.

This research was in part conducted pursuant to the receipt of financial assistance from the U.S. Department of Commerce, Economic Development Administration. The statements, findings, conclusions, recommendation and other data are solely those of the authors and publishers, and do not necessarily reflect the views of the government or the University.

# MICHIGAN KNOWLEDGE ECONOMY INDEX

## Introduction

### Introduction

The role of technology is an increasingly important element of a healthy, globally competitive economy. Technology is strongly linked to the creation of higher-skilled higher-paying jobs. In Michigan the average knowledge economy wage (selected occupations of education/training, computers, life and social science occupation, architects, engineers, and management occupations) is approximately \$61,000 per year, while the average wage in Michigan for all occupations is just over \$ 37,000 per year. Knowledge-based jobs earn approximately \$25,000 per year more in wages.

While some communities are poised to help their citizens benefit from the increasing role of technology in their economy, others are ill-prepared to move forward in the knowledge economy, leaving them vulnerable to economic decline. This research report is intended to assist communities in identifying their position in the knowledge economy and facilitate the development of effective state and local knowledge economy economic development strategies. For the purposes of this study the research team defined the knowledge economy as “the application of new methods or new technologies to the production or distribution of goods and services”. The knowledge economy affects existing enterprises while also offering opportunities for new and emerging enterprises to offer new products and services.

The MSU-CEDP EDA University Center seeks to help communities and industry, particularly those most economically vulnerable, to take an active role in preparing for this knowledge economy and overcoming the barriers to creating higher-skilled higher-wage jobs. This emphasis on the knowledge economy complements existing economic development efforts such as small business development and retention, manufacturing retention and expansion, capital asset development, and community economic development that are ongoing in many communities throughout the state.

The methodology used in this analysis parallels similar research conducted on the national level by Robert D. Atkinson, et. al., of the Progressive Policy Institute (PPI) Technology & New Economy Project. In their pioneering work, The State New Economy Index (1999), PPI provided a state by state comparison of knowledge economy indicators. PPI later conducted a similar metropolitan-level analysis, comparing the largest metro regions on similar variables. The full texts of PPI's New Economy Index reports are available on-line at [www.neweconomyindex.org](http://www.neweconomyindex.org).

This report applies a similar analysis of knowledge economy indicators, for the State of Michigan at the county level. Significant variations were made in applying the methodology to accommodate data availability at the county level. The authors have made every attempt to use the best available and reliable data to represent the knowledge economy. We recognize that alternative variables may exist for some of the indicators suggesting a different profile for a county in the knowledge economy. We encourage readers to reflect on their understanding of their local community and to construct their own indicators of their local economy. Research by the MSU-CEDP EDA University Center has revealed that, despite the importance of regional

preparation, planning for the knowledge economy is limited. A recent study of the key organizations responsible for economic development planning in Michigan found that these organizations were not fully aware of the opportunities in the knowledge economy, nor the preparation required for their communities to thrive in such an environment.<sup>1</sup> Furthermore, planning for the information and communications technology infrastructure, workforce development, regional predictors of private sector technology investments, and other predictors of competitiveness in the knowledge economy, were not found to be incorporated into the traditional economic development planning that occurs at the local and regional level.

It is our hope that the information presented here will assist local, regional and state leaders in community and economic development to be better prepared to anticipate and plan for economic development in a globally competitive knowledge economy.

**Notes on corrected edition:**

In March 2007 this publication was updated as follows: on page 34, county rankings for Knowledge Jobs category were changed to insert an omitted Macomb County rank (15) and adjust the remainder of column accordingly; on pages 35 and 36, indicator rankings for Bioscience Jobs were changed to indicate that multiple counties were tied with rank of 18. Also on pages 35 and 36 changes were made to reflect rounding errors in several individual indicators (15 discrete adjustments of exactly one rank in either direction); on pages 33 and 34, changes were made to reflect tied rankings and rounding errors for several category ranks (19 discrete changes, most of only one rank in either direction), including a change in one Overall Index rank (Gogebic County, from 53 to tied at 52). Finally, minor corrections were made to two Category maps: on page 8, Bay County was darkened by one shade on the Innovation Capacity Category map; on page 14, Gladwin County was darkened by one shade on the Digital Economy Category map. Affected pages are indicated by including the date of correction (3/07) in footer text.

# OVERALL KNOWLEDGE ECONOMY INDEX

## Description:

The Overall Knowledge Economy Index is calculated as the simple unweighted average of a county's rank for the sixteen individual indicators. Based on this method, Oakland County is indicated as ranking highest overall in the Michigan Knowledge Economy Index, followed by Washtenaw and Ingham Counties.

## Top Ten Counties

1. Oakland
2. Washtenaw
3. Ingham
4. Kent
5. Ottawa
6. Wayne
7. Livingston
8. Kalamazoo
9. Barry
10. Clinton

# KNOWLEDGE JOBS CATEGORY

## Description:

As knowledge and information continue to drive economic growth, providing knowledge jobs is increasingly critical to generating economic growth.

The Knowledge Jobs Category is calculated as the average of a county's rank for three indicators:

**Information Technology Jobs, Workforce Education,** and **Management and Professional Jobs.** Washtenaw County had the highest average rank, followed by Oakland and Ingham Counties.

## Top Ten Counties

1. Washtenaw
2. Oakland
3. Ingham
4. Kalamazoo
5. Leelenau
6. Grand Traverse
- 7T. Livingston
- 7T. Midland
9. Kent
10. Emmet

# KNOWLEDGE JOBS

## Information Technology Jobs

### Description:

A thriving knowledge economy is characterized by an ample supply of jobs in information and communication technology related industries.

Top Ten Counties (percent of workforce)	
1. Oakland	4.7 %
2. Washtenaw	3.1
3. Ingham	2.7
4. Saginaw	2.2
5. Otsego	2.2
6. Baraga	2.0
7. Presque Isle	1.9
8. Genesee	1.8
9. Kalamazoo	1.8
10. Wayne	1.7

**Information Technology Jobs** are represented in the Knowledge Economy Index as *the percentage of the workforce employed* in four information technology related industry categories.

Statewide in 2000, about 0.5% of Michigan's workers were employed in such industries.

### Legend (% of workforce)

- Less than 0.50
- 0.50 - 0.75
- 0.75 - 1.50
- more than 1.50

**Source:** 2000 County Business Patterns (NAICS), U. S. Census Bureau.

Online at <http://censtats.census.gov/cgi-bin/cbpnaic/cbpsel.pl>

Information on employment for high technology industries was derived from U. S. Census data. Four NAICS industry codes were identified to represent industries providing IT jobs (5132 Cable Networks and Program Distribution; 5133 Telecommunications; 514 Information Services and Data Processing Services; and 5415 Computer Systems Design and Related Services). The number of jobs for each code and the total number of jobs was determined for each county. For each county, the combined number of jobs in the IT categories was divided by the total number of jobs to determine the percentage of the workforce employed in IT jobs.

# KNOWLEDGE JOBS

## Workforce Education

### Description:

To compete in the knowledge economy, a community must offer an innovative, well-trained workforce. One common measure of the level of training among a modern workforce is a college education.

**Top Ten Counties  
(percent of workforce)**

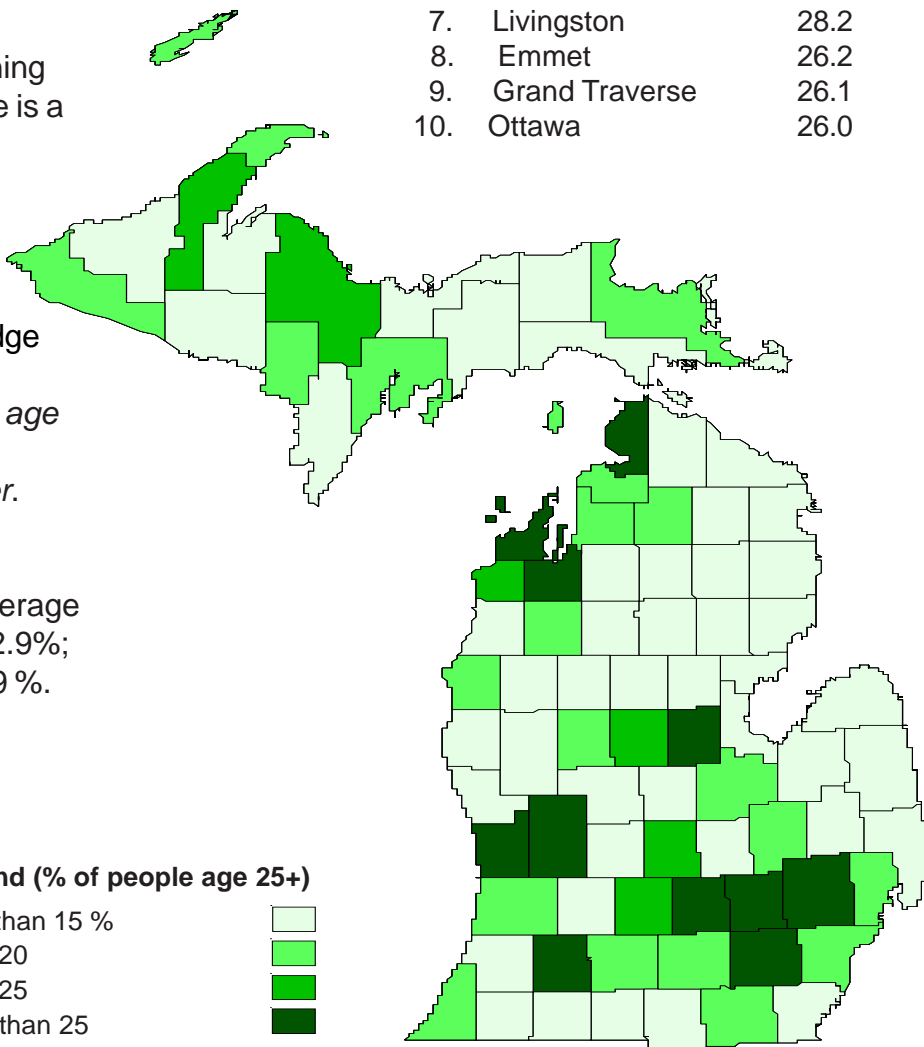

1.	Washtenaw	48.1 %
2.	Oakland	38.2
3.	Ingham	33.0
4.	Leelanau	31.4
5.	Kalamazoo	31.2
6.	Midland	29.3
7.	Livingston	28.2
8.	Emmet	26.2
9.	Grand Traverse	26.1
10.	Ottawa	26.0

**Workforce Education** is represented in the Knowledge Economy Index as *the percentage of people over age 25 who have completed a bachelor's degree or higher.*

The statewide average for Michigan is 21.8%. The average for the Midwest region is 22.9%; the national average is 23.9 %.

### Legend (% of people age 25+)

Less than 15 %	
15 - 20	
20 - 25	
More than 25	

**Source:** U.S. Census Bureau, Census 2000 Summary File 3, Matrices P19, P36, P37, P38, PCT24, and PCT25

Data for county and statewide averages were derived from the Census Bureau's American Factfinder, which provides summary tables at the county level for selected 2000 Census responses, including educational attainment. Table GCT-P11 includes the percentage of each county's population age 25 and above having completed at least a bachelor's degree. National and regional averages were obtained using American Factfinder (online at <http://factfinder.census.gov>).

# KNOWLEDGE JOBS

## Management and Professional Jobs

### Description:

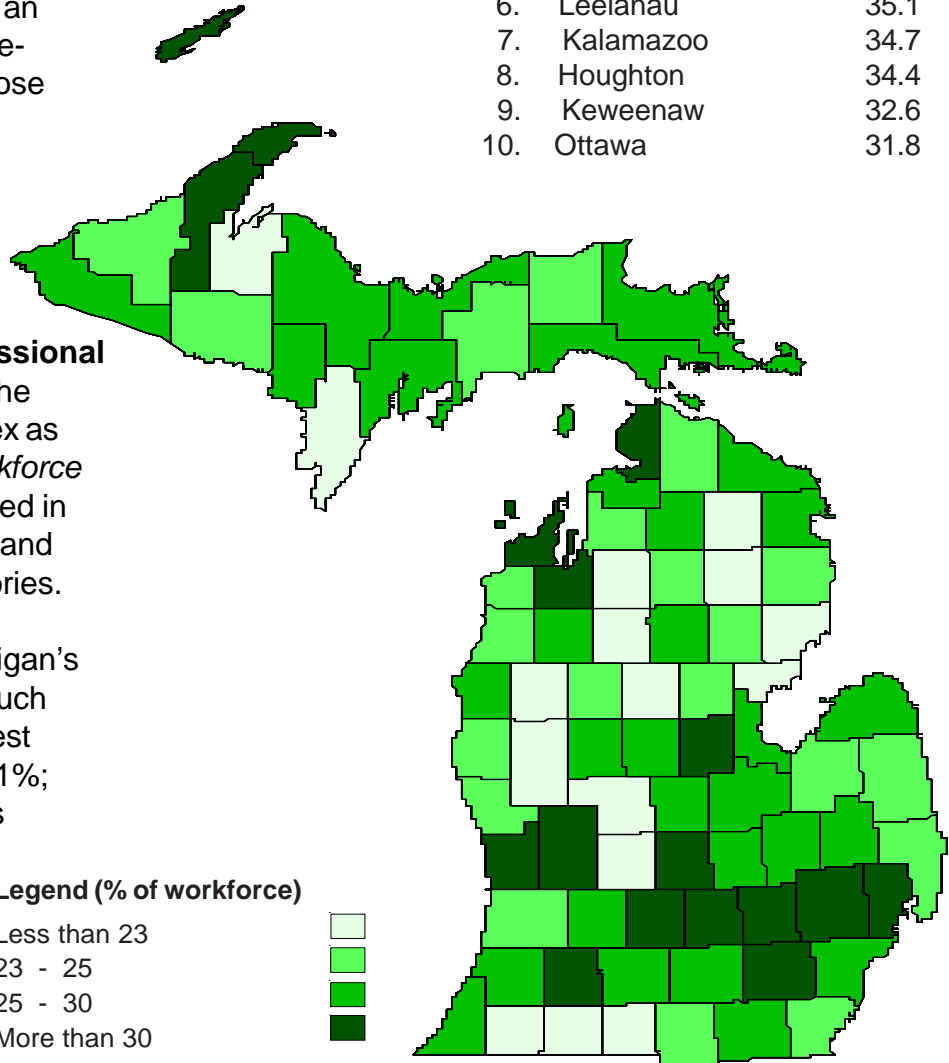

As economic growth continues to shift toward information and service related industries, an important set of knowledge-based occupations are those classified as managerial, professional and related knowledge occupations.

**Management and Professional Jobs** are represented in the Knowledge Economy Index as *the percentage of the workforce aged 16 and over employed in managerial, professional, and related occupation categories.*

Statewide, 31.5% of Michigan's workforce is engaged in such occupations. In the Midwest region, the average is 32.1%; nationwide, the average is 33.6%.

### Top Ten Counties (percent of workforce)

1.	Washtenaw	48.3 %
2.	Oakland	44.6
3.	Midland	37.4
4.	Ingham	36.9
5.	Livingston	36.8
6.	Leelanau	35.1
7.	Kalamazoo	34.7
8.	Houghton	34.4
9.	Keweenaw	32.6
10.	Ottawa	31.8

### Legend (% of workforce)

- Less than 23
- 23 - 25
- 25 - 30
- More than 30

**Source:** U.S. Census Bureau, Census 2000 Summary File 3, Matrices P49, P50, and P51.

Online at [http://factfinder.census.gov/bf/?lang=en\\_vt\\_name=DEC\\_2000\\_SF3\\_U\\_GCTP13\\_ST2\\_geo\\_id=04000US26.html](http://factfinder.census.gov/bf/?lang=en_vt_name=DEC_2000_SF3_U_GCTP13_ST2_geo_id=04000US26.html)

Data for county and statewide averages were derived from the Census Bureau's American Factfinder, which provides summary tables at the county level for selected 2000 Census responses, including distribution of employment by occupation. Table GCT-P13 includes the percentage of each county's civilian workforce age 16 and above employed in each of six occupation categories (Management, professional, and related; Service; Sales and office; Farming, fishing and forestry; Construction, extraction, and maintenance; and Production, transportation, and material moving). National and regional averages were also obtained using American Factfinder (online at <http://factfinder.census.gov>).

# INNOVATION CAPACITY CATEGORY

## Description:

In a knowledge economy, the ability of communities to transform new ideas into economic opportunities for new firms and skilled workers is critical to continued vitality.

The Innovation Capacity Category is calculated as the simple average of a county's rank for five indicators:

**High Technology Jobs, Venture Capital Firms, Patents, Engineers, and Bioscience Jobs.** Washtenaw County had the highest rank, followed by Oakland and Ingham Counties.

## Top Ten Counties

1. Washtenaw
2. Oakland
3. Ingham
4. Midland
5. Houghton
6. Ottawa
- 7T. Berrien
- 7T. Wayne
9. Kent
10. Kalamazoo

# INNOVATION CAPACITY

## High Technology Jobs

### Description:

The prevalence of jobs in industries that rely on advanced technologies can reflect the degree to which a community is participating in the leading edge of economic activity.

**High Technology Jobs** are represented in the Michigan Knowledge Economy Index as *the percentage of the workforce employed* in one of seven industry categories representing high technology firms.

Statewide, 2.8 % of Michigan's workforce was employed in such enterprises in 2000.

### Top Ten Counties (percent of workforce)

1.	Otsego	6.7
2.	Oakland	6.2
3.	Washtenaw	5.9
4.	Kalkaska	5.8
5.	Ingham	3.3
6.	Genesee	3.1
7.	Ottawa	3.0
8.	Van Buren	3.0
9.	Berrien	2.8
10.	Houghton	2.7

### Legend (% of workforce)

- Less than 0.75
- 0.75 - 1.5
- 1.5 - 3.0
- More than 3.0

INNOVATION

**Source:** 2000 County Business Patterns (NAICS), U. S. Census Bureau.

Online at <http://censtats.census.gov/cgi-bin/cbpnaic/cbpsel.pl>

Information on employment for high technology industries was derived from U. S. Census data. Seven NAICS industry codes were identified to represent industries providing high technology related jobs (334 Computer and Electronic Product Manufacturing; 5112 Software Publishers; 5132 Cable Networks and Program Distribution; 5133 Telecommunications; 514 Information Services and Data Processing Services; 5415 Computer Systems Design and Related Services; and 5417 Scientific Research and Development). The number of jobs for each code and the total number of jobs was determined for each county. For each county, the combined number of jobs in the high technology categories was divided by the total number of jobs to determine the percentage of the workforce employed in such jobs.

# INNOVATION CAPACITY

## Venture Capital

### Top Counties (number of firms)

1.	Washtenaw	23
2.	Oakland	20
3.	Wayne	9
4.	Ingham	3
5T.	Jackson	2
	Kent	2

### Description:

In an economy that relies on innovation for growth, the fiscal capacity for supporting innovative business enterprises is critical. Geographic proximity to venture capital firms is an indicator of a community's access to the necessary capital for innovation to take place.

**Venture Capital** is represented by the *number of venture capital firms* in Michigan counties.

Michigan venture capital firms are highly concentrated in a few counties. Forty-three of the 63 venture capital firms in Michigan are located in just two counties: Oakland and Washtenaw.

INNOVATION

**Source:** Michigan Economic Development Corporation (MEDC), 2003.

Online at <http://www.medc.michigan.org>.

The MEDC maintains a database of venture capital firms located in Michigan. The number of firms included in the database as of March 2003 were identified, and their home office locations included in this indicator.

# INNOVATION CAPACITY

## Patents

### Description:

In an economy in which innovation and intellectual capital are crucial for continuing success, the number of patents generated by research and development activity is an important measure.

**Patents** are represented in the Knowledge Economy Index as *the number of patents registered per 100,000 population*.

Statewide in 2002, the average was 4.1 patents per 100,000 population.

INNOVATION

**Source:** United States Patent Bureau, 2002.

Online at <http://patft.uspto.gov/netahtml/search-adv.htm>

Using the online U.S. Patent and Trade Office (USPTO) database, all new patents registered in calendar year 2002 were identified by the geographic location of the patent assignee. For those patents with assignees located in Michigan, each patent was associated with the county in which the assignee address is located.

# INNOVATION CAPACITY

## Engineers in the Workforce

### Description:

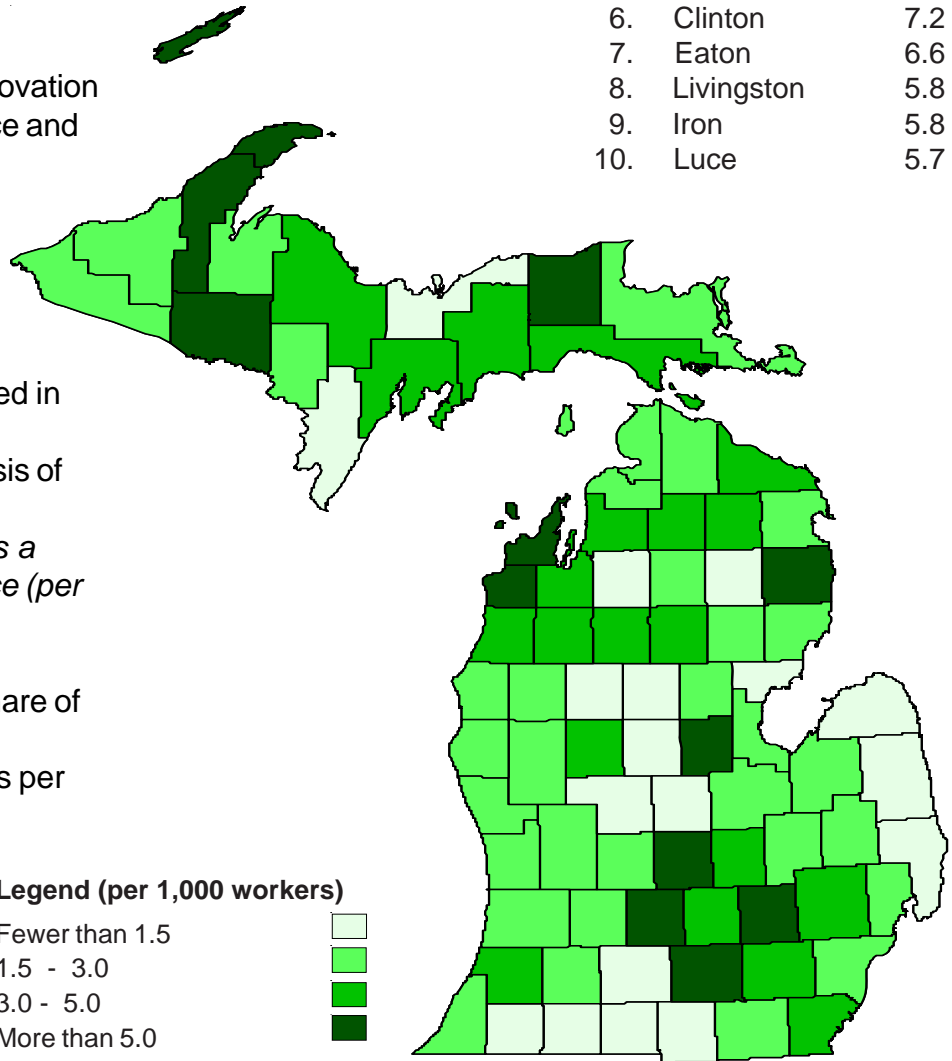

Professional engineers comprise a high-wage, high-skill occupation category, and therefore can serve as an indicator of the level of innovation of a community's workforce and industry base.

**Engineers** are represented in the Michigan Knowledge Economy Index on the basis of *the number of licensed professional engineers as a share of the total workforce (per 10,000 workers)*.

Statewide, the average share of the workforce made up by engineers is 2.7 engineers per 10,000 workers.

### Legend (per 1,000 workers)

Fewer than 1.5	
1.5 - 3.0	
3.0 - 5.0	
More than 5.0	

### Top Ten Counties (per 10,000 workers)

1.	Keweenaw	15.8
2.	Alcona	9.0
3.	Houghton	8.9
4.	Benzie	8.7
5.	Midland	7.3
6.	Clinton	7.2
7.	Eaton	6.6
8.	Livingston	5.8
9.	Iron	5.8
10.	Luce	5.7

**Source:** Michigan Department of Consumer and Industry Services (CIS), 2002.

Professional engineers are licensed by the State of Michigan. The Licensing Division of the Michigan Department of Labor and Economic Growth (formerly Consumer and Industry Services) maintains a database of registered engineers, including residential address. Using a hard copy printout of the database, addresses of licensed engineers were aggregated to the county level, and are reported as a share of the total county workforce (private, nonfarm workers over 16) as reported by the United States Census Bureau, 2000.

# INNOVATION CAPACITY

## Bioscience Jobs

### Description:

Bioscience firms comprise a business sector that relies on scientific innovation. The location of such firms and employment opportunities can indicate the degree of innovation evident in a community's economy.

### Top Ten Counties (number of jobs)

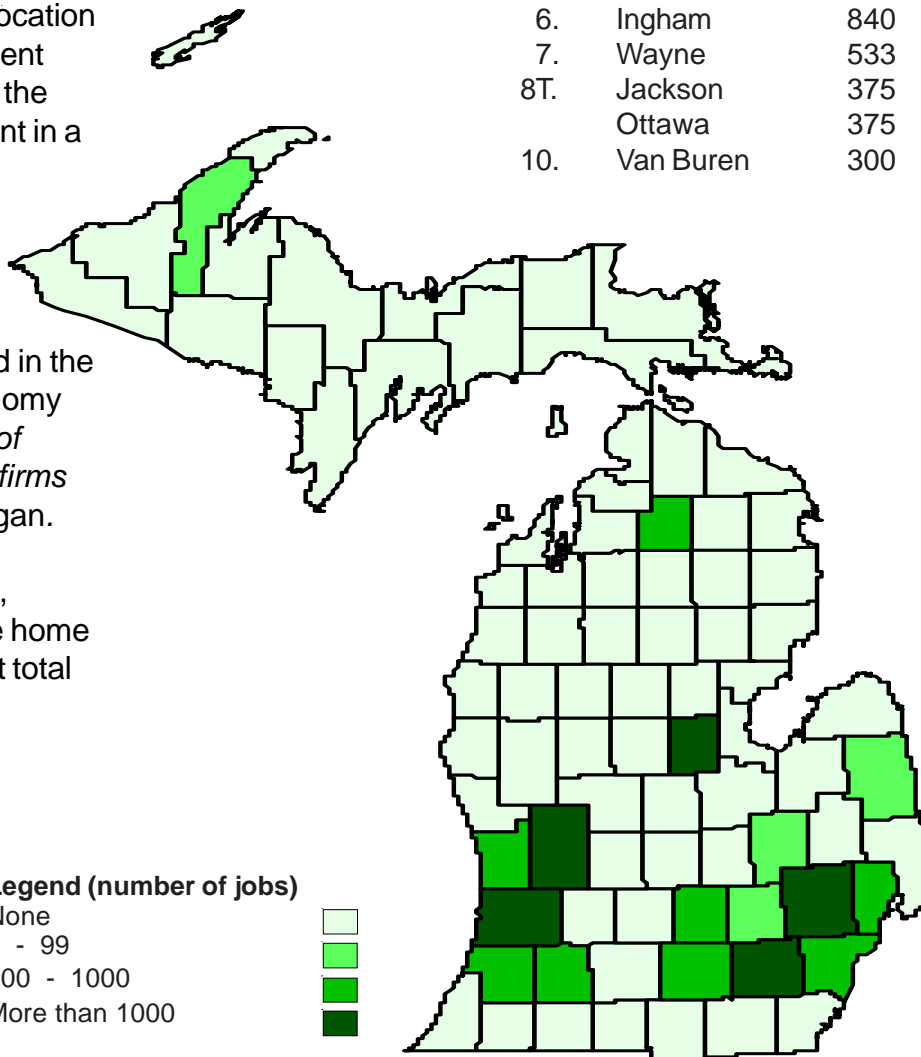

1.	Midland	50,200
2.	Oakland	12,503
3.	Kent	9,905
4.	Allegan	5,513
5.	Washtenaw	2,036
6.	Ingham	840
7.	Wayne	533
8T.	Jackson	375
	Ottawa	375
10.	Van Buren	300

**Bioscience** is represented in the Michigan Knowledge Economy Index as *the total number of employees in bioscience firms with headquarters in Michigan.*

Among Michigan Counties, Midland and Oakland were home to the firms with the highest total numbers of bioscience employees.

### Legend (number of jobs)

None	
1 - 99	
100 - 1000	
More than 1000	

INNOVATION

**Source:** Dun and Bradstreet's Million Dollar Database, 2002.

Online at <http://www.dnb.com>

The Dun and Bradstreet Million Dollar Database was searched for companies in five industry codes as defined in the 1997 Economic Census - Medicinals/Botanicals (325411), Pharmaceuticals (325412), Diagnostic Substances (325413), Bioclogical Products except Diagnostic (325414), Research and Development in the Life Sciences (55417102) - that may be considered bioscience industries. For companies with headquarters located in Michigan, the total number of employees (worldwide) were included in the county totals for this indicator.

# DIGITAL ECONOMY CATEGORY

## Description:

New technologies facilitate the increasingly rapid communication of ideas and exchange of information. Economic development relies on effective uses of such technology by citizens, governments, and businesses.

The Digital Economy Category is calculated as the average of a county's rank for three indicators: **Internet Use**, **Digital Government**, and **Cable Modem Access**. Ingham County had the highest rank, followed by Kalamazoo and Bay Counties.

## Top Ten Counties

1. Ottawa
2. Kent
- 3T. Allegan
- 3T. Muskegon
5. Bay
6. Ionia
7. Wayne
8. Saginaw
9. Ingham
10. Kalamazoo

DIGITAL ECONOMY

# DIGITAL ECONOMY

## Internet Use

### Description:

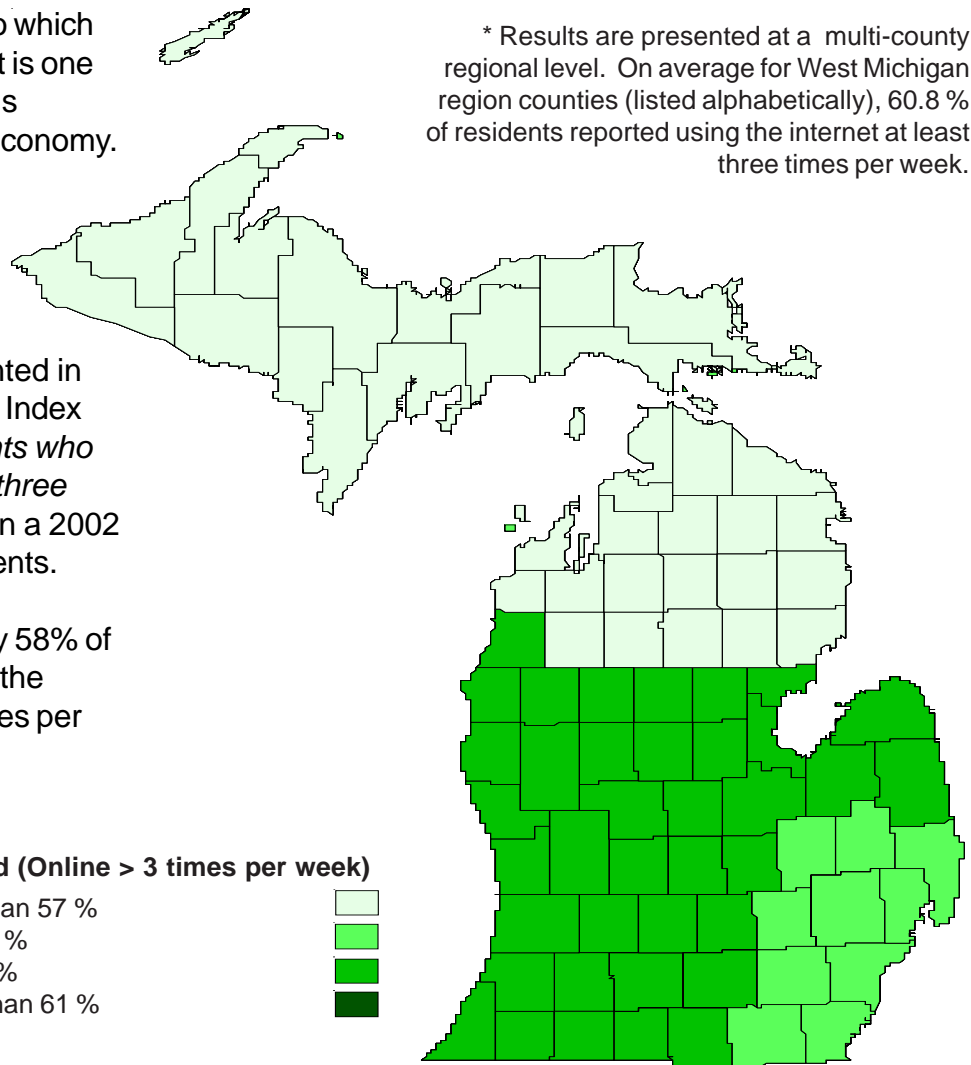

In an economy in which the Internet is increasingly used for both social and commercial transactions, the extent to which residents use the Internet is one indicator of a community's integration in the digital economy.

**Internet Use** is represented in the Knowledge Economy Index as *the percent of residents who use the Internet at least three times per week*, based on a 2002 survey of Michigan residents.

Statewide, approximately 58% of residents reported using the Internet at least three times per week.

### Legend (Online > 3 times per week)

Less than 57 %  
 57 - 59 %  
 59 - 61 %  
 More than 61 %

### Top Counties\* (percent online at least 3x per week)

Barry	Mason	Oceana
Ionia	Mecosta	Osceola
Kent	Montcalm	Ottawa
Lake	Muskegon	

\* Results are presented at a multi-county regional level. On average for West Michigan region counties (listed alphabetically), 60.8 % of residents reported using the internet at least three times per week.

Source: Institute for Public Policy and Social Research. 2002. State of the State Survey-28 (Fall-2). Michigan State University. East Lansing.

Online at <http://www.ippsr.msu.edu/SOSS>

The 28th round of the State of the State Survey (SOSS) was conducted by MSU's Institute for Public Policy and Social Research (IPPSR) from October 19 through December 31, 2002. The quarterly survey is administered by telephone by IPPSR's Office for Survey Research. This round of the survey reached 989 Michigan adults. Results were aggregated to MSU Extension regions, which include six multi-county regions (responses from the City of Detroit are incorporated into Southeast Michigan results).

Regarding Internet use, respondents were asked, "How often, if at all, do you access the Internet, either for the purposes of sending e-mail or visiting or browsing the "world wide web?"

# DIGITAL ECONOMY

## Digital Government

### Description:

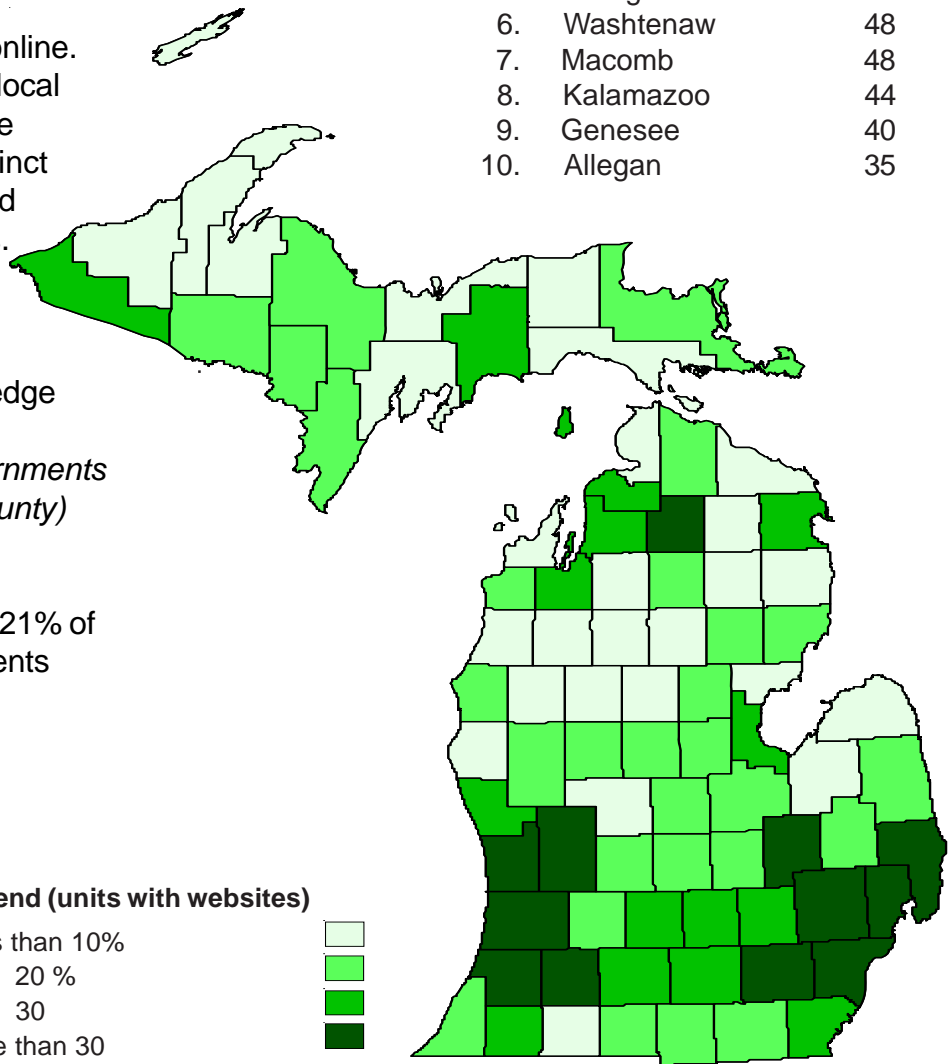

Residents and businesses increasingly expect local governments to provide information and services online. In a knowledge economy, local governments with an online presence may be at a distinct advantage in attracting and retaining people and firms.

**Digital Government** is represented in the Knowledge Economy Index as the *percentage of local governments (city, village, township, county) that have a website.*

Statewide, approximately 21% of Michigan's local governments had websites as of 2000.

### Top Ten Counties (percent with websites)

1.	Oakland	72 %
2.	Ottawa	60
3.	Wayne	57
4.	Kent	54
5.	Otsego	50
6.	Washtenaw	48
7.	Macomb	48
8.	Kalamazoo	44
9.	Genesee	40
10.	Allegan	35

### Legend (units with websites)

- Less than 10%
- 10 - 20 %
- 20 - 30
- More than 30

**Source:** Cyber-state.org, Local Government & Community Initiative.

Online at [http://www.cyber-state.org/1\\_0/govt2001/mi\\_localgov.html](http://www.cyber-state.org/1_0/govt2001/mi_localgov.html)

As part of its Local Government and Community Initiative, Cyber-state of Ann Arbor conducts an annual study of Michigan local government websites. Cyber-state provides a list of all local units of government (county, township, city, and village) that have websites. This information was used in conjunction with a list of all local units of government generated from the U.S. Census to calculate the percentage of total units in each county with a website.

# DIGITAL ECONOMY

## Cable Modem Access

### Description:

In a digital age, access to a high-speed information and communications infrastructure is essential for advancing the knowledge economy. One measure of a community's telecommunication infrastructure is the extent to which residents and business firms have access to broadband technologies including DSL and cable.

**Cable Modem Access** is represented in the Knowledge Economy Index as the *geographic extent of cable modem access* within each county (projected through January, 2002).

### Top Counties\* (extent of coverage)

1. Leelanau
2. Grand Traverse
- 3T. Alpena  
Lapeer  
Otsego

\*Nine counties were tied with the sixth highest ranking.

### Legend (extent of coverage)

- None
- Modest
- Significant
- Near-total or Total

**Source:** Michigan Economic Development Corporation, 2000.

Online at <http://www.michigan.org>.

In January 2000 MEDC released a map of cable modem infrastructure coverage, including existing coverage as of January 2000 and projected coverage to January 2002. Using the map's projected 2002 area coverage, independent raters estimated the extent of geographic coverage in each county and classified coverage into twelve categories (total coverage, no coverage, and ten intermediate stages). After comparing the independent ratings, the raters discussed differences until reaching consensus on the rankings, which were then consolidated into the four categories presented.

# GLOBALIZATION CATEGORY

## Description:

To be competitive in the new economy, cities and regions must operate in the global economy.

The Globalization Category is calculated as the average of a county's rank for two indicators: **Firms with Foreign Parents** and **Exporting Firms**. Oakland County had the highest average rank, followed by Wayne and Kent Counties.

## Top Ten Counties

1. Oakland
2. Wayne
3. Kent
4. Macomb
5. Washtenaw

GLOBALIZATION

# GLOBALIZATION

## Firms with Foreign Parents

### Description:

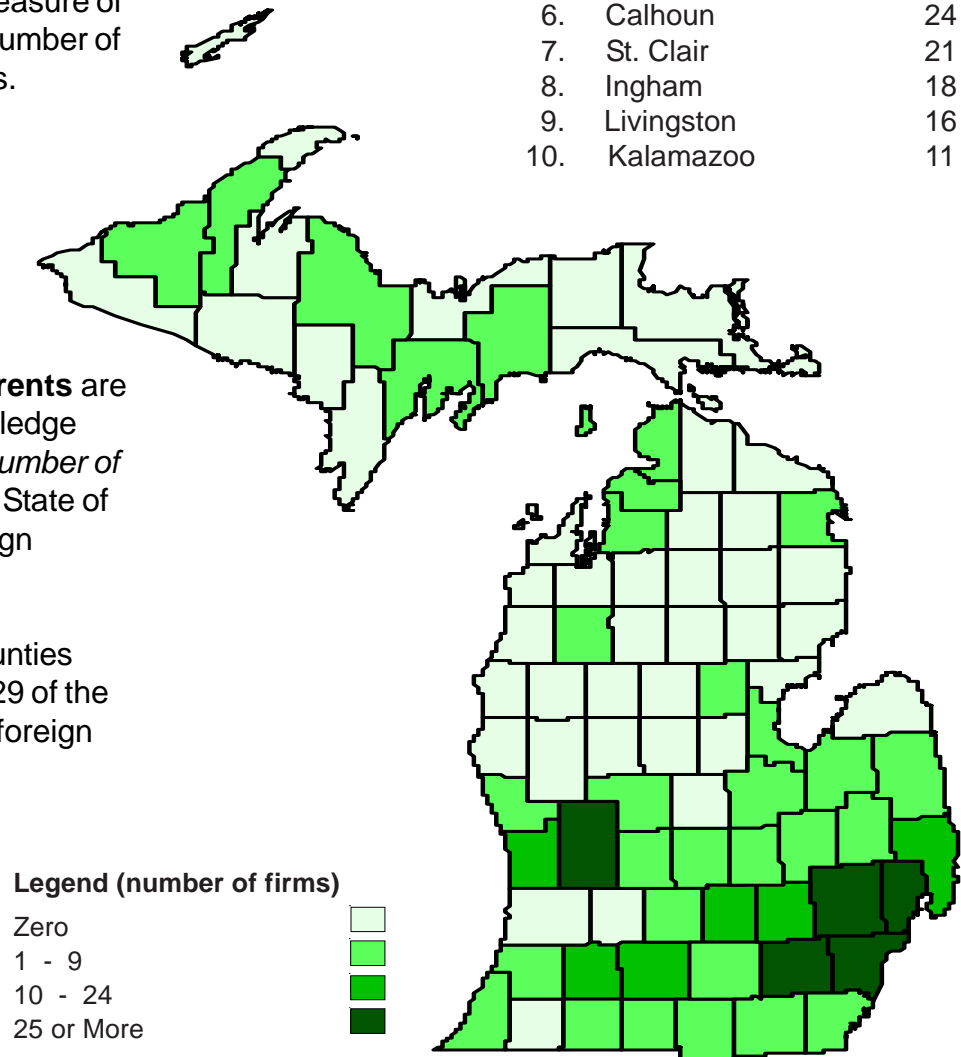

To succeed in a global market, communities must have a strong global presence. One measure of this globalization is the number of firms with foreign parents.

**Firms with Foreign Parents** are represented in the Knowledge Economy Index as *the number of firms* registered with the State of Michigan as having foreign parents.

Oakland and Wayne Counties together had a total of 529 of the 860 Michigan firms with foreign parents.

### Top Ten Counties (number of firms)

1.	Oakland	359
2.	Wayne	170
3.	Kent	51
4.	Washtenaw	47
5.	Macomb	43
6.	Calhoun	24
7.	St. Clair	21

GLOBALIZATION

Source: Michigan Economic Development Corporation (MEDC), 2001.

The MEDC International and National Business Development division maintains a database of Michigan Companies with Foreign Parents, including information about both the Michigan company and the parent company. From a hard copy database printout issued June 19, 2001, companies were assigned to counties based on their reported Michigan address.

# GLOBALIZATION

## Exporting Firms

### Description:

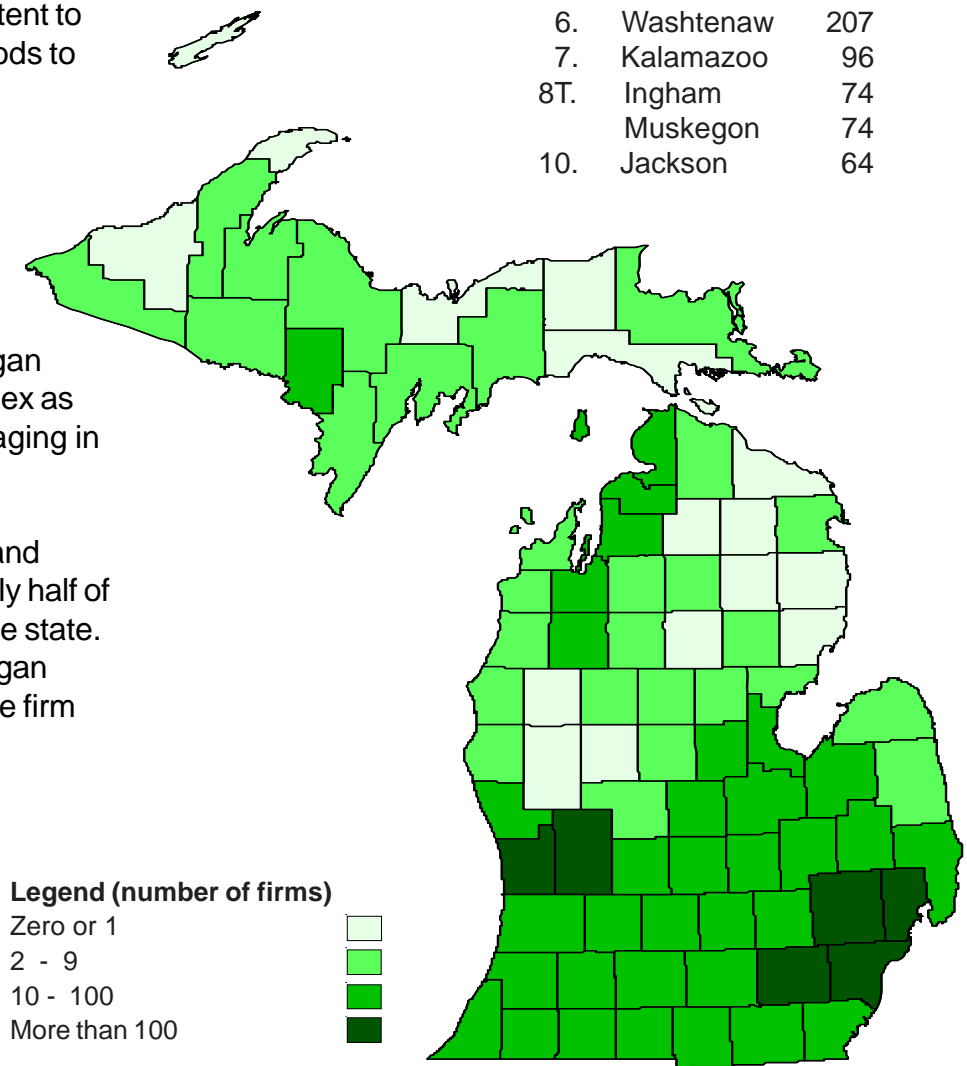

One important measure of how fully a region participates in the global economy is the extent to which its firms export goods to foreign markets.

**Exporting Firms** are represented in the Michigan Knowledge Economy Index as the *number of firms* engaging in production for export.

Two counties - Oakland and Wayne - account for nearly half of the 3,450 such firms in the state. However, nearly all Michigan counties have at least one firm engaged in exporting.

### Top Ten Counties (number of firms)

1.	Oakland	765
2.	Wayne	410
3.	Macomb	377
4.	Kent	291
5.	Ottawa	237
6.	Washtenaw	207
7.	Kalamazoo	96
8T.	Ingham	74
	Muskegon	74
10.	Jackson	64

### Legend (number of firms)

Zero or 1	
2 - 9	
10 - 100	
More than 100	

**Source:** Michigan Economic Development Corporation (MEDC), 2002.

Online at <http://www.medc.michigan.org>

The MEDC maintains a database of firms that export goods in the following categories: Agriculture, Computers, Machine Tools, Other, Automotive, Environmental, Medical, and Plastics. Companies were associated with the county identified by the business address, and the number of firms were counted in each county.

# ECONOMIC DYNAMISM CATEGORY

## Description:

In an environment marked by rapid changes, adaptation to a changing environment is crucial. Such adaptation is often evidenced by “churn” in the workforce, as new jobs replace old jobs in the economy, and new enterprises form and aging enterprises transform themselves.

The Economic Dynamism Category is calculated as the average of a county’s rank for three indicators:

**Manufacturing Employment Change, Service Sector Employment Change, and Sole Proprietorship**

**Employment Change.** Clare County had the highest average rank, followed by Lake and Crawford Counties.

## Top Ten Counties

1. Clare
2. Lake
3. Crawford
4. Barry
5. Benzie
6. Antrim
7. Arenac
8. Kalkaska
9. Branch
10. Missaukee

# ECONOMIC DYNAMISM

## Manufacturing Employment Change

### Top Ten Counties (absolute change)

#### Description:

Manufacturing employment has historically provided a significant share of the high wage jobs in Michigan. In a knowledge economy, rapid change in the employment mix across sectors is often evident, and economic transformation in a local economy may depend on harnessing the opportunities this rapid change may present.

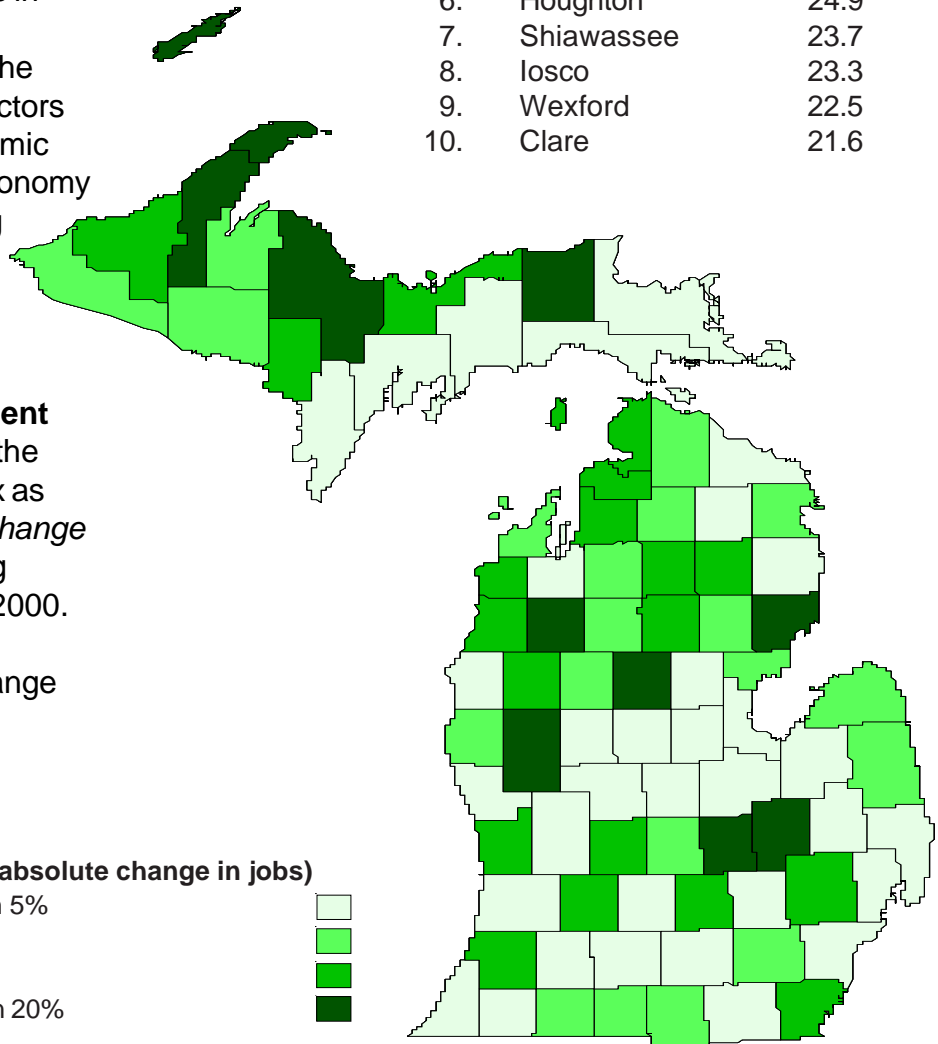

1.	Marquette	45.4 %
2.	Newaygo	38.1
3.	Keweenaw	33.3
4.	Luce	29.2
5.	Genesee	25.9
6.	Houghton	24.9
7.	Shiawassee	23.7
8.	Iosco	23.3
9.	Wexford	22.5
10.	Clare	21.6

**Manufacturing Employment Change** is represented in the Knowledge Economy Index as *the absolute percentage change in jobs in the manufacturing sector between 1997 and 2000.*

Statewide, the average change was about one percent.

#### Legend (absolute change in jobs)

Less than 5%	
5 - 10 %	
10 - 20%	
More than 20%	

**Source:** Michigan Economic Development Corporation Economic Profiler.

Online at <http://medc.michigan.org/MiInfo/Places/>

County employment totals for the manufacturing sector were used to determine the net gain or loss of such jobs in each county. The change from 1997 to 2000 totals (gain or loss) was calculated as a percentage of the 1997 figure, and the absolute value of that change is represented in this indicator.

# ECONOMIC DYNAMISM

## Service Employment Change

### Top Ten Counties (absolute change)

#### Description:

One characteristic of the knowledge economy is a shift from a manufacturing to a service economy. The rate of change in the number of service sector jobs is one factor to consider in seeking to understand the implications of a rapidly changing economic environment

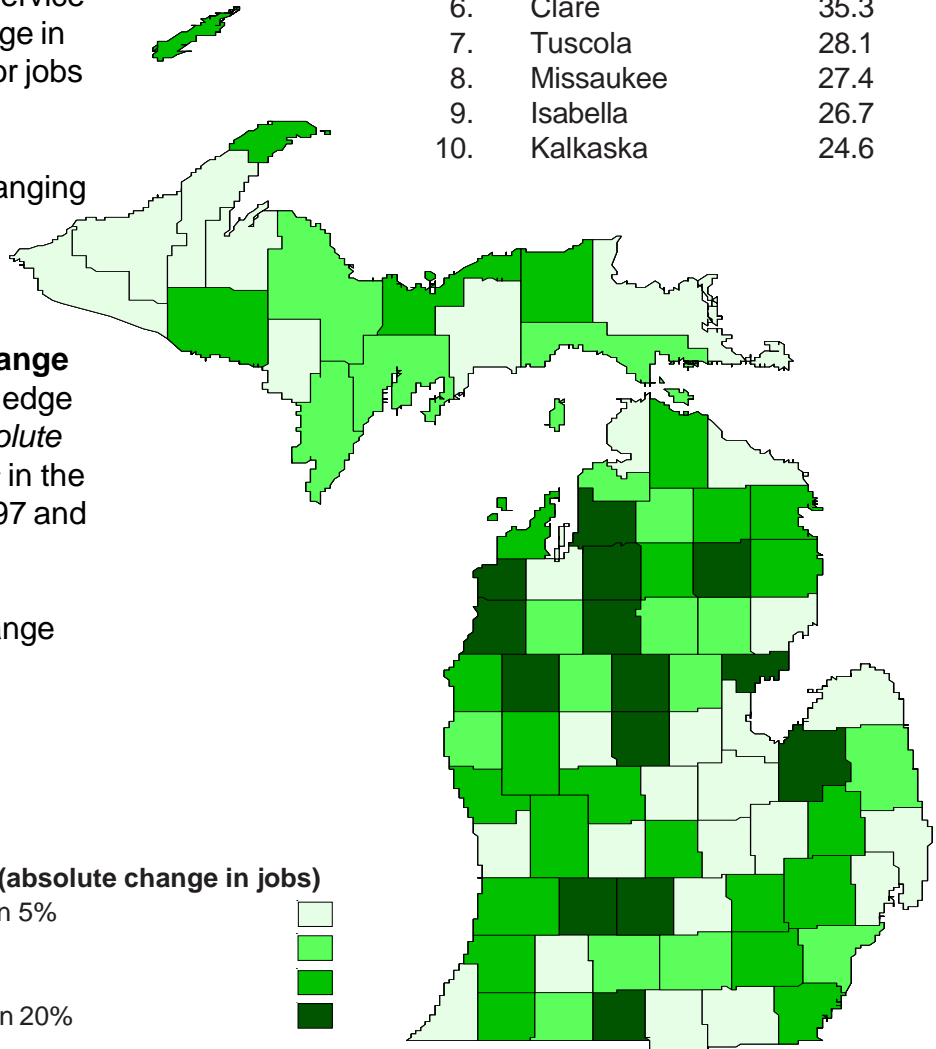

1.	Lake	72.4 %
2.	Arenac	70.4
3.	Barry	46.9
4.	Benzie	40.2
5.	Manistee	36.0
6.	Clare	35.3
7.	Tuscola	28.1
8.	Missaukee	27.4
9.	Isabella	26.7
10.	Kalkaska	24.6

**Service Employment Change** is represented in the Knowledge Economy Index as *the absolute percentage change in jobs in the service sector between 1997 and 2000*.

Statewide, the average change was 7.6%.

#### Legend (absolute change in jobs)

Less than 5%

County employment totals for the service sector were used to determine the net gain or loss of such jobs in each county. The change from 1997 to 2000 totals (gain or loss) was calculated as a percentage of the 1997 figure, and the absolute value of that change is represented in this indicator.

# ECONOMIC DYNAMISM

## Sole Proprietorship Employment Change

### Top Ten Counties (absolute change)

#### Description:

In a knowledge economy, innovation and entrepreneurial activity are viewed as increasingly significant. One outcome of the entrepreneurial culture is an emphasis on businesses operated as sole proprietorships.

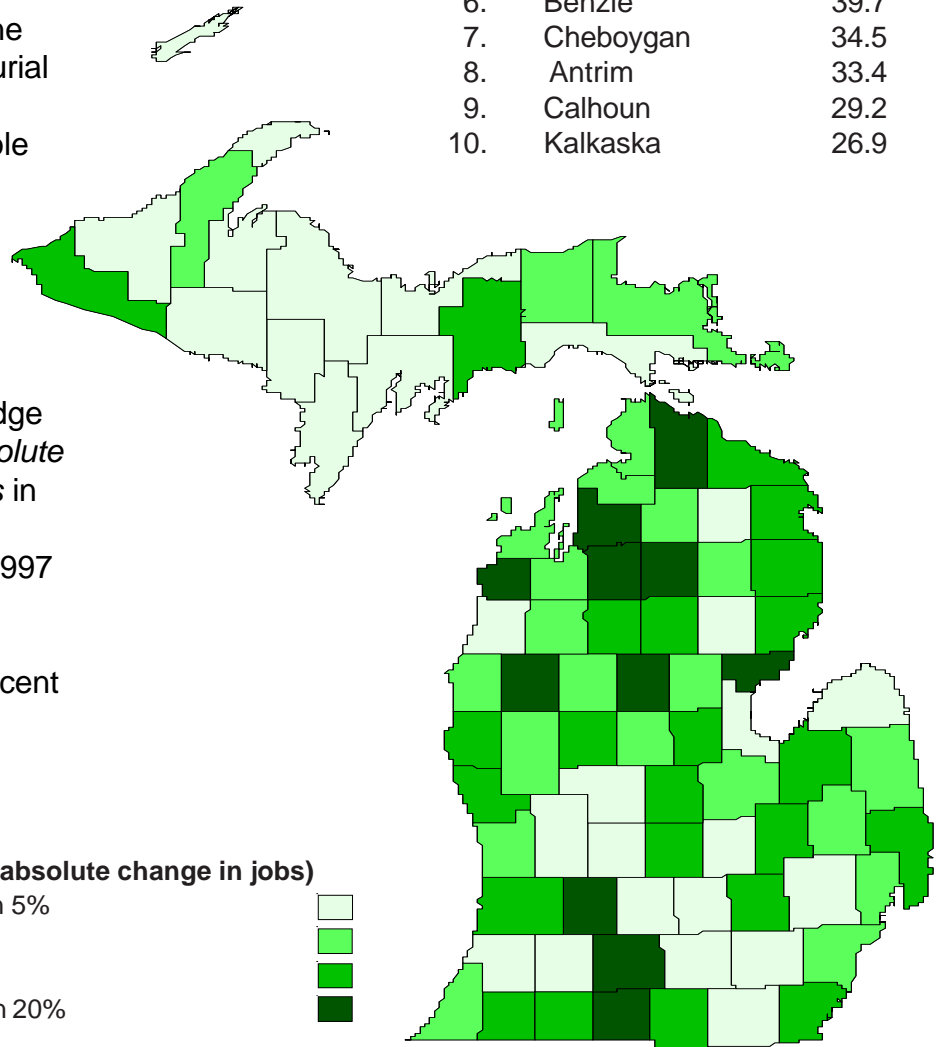

1.	Clare	72.8 %
2.	Barry	61.1
3.	Lake	60.0
4.	Arenac	57.3
5.	Crawford	46.6
6.	Benzie	39.7
7.	Cheboygan	34.5
8.	Antrim	33.4
9.	Calhoun	29.2
10.	Kalkaska	26.9

**Sole Proprietorship Employment Change** is represented in the Knowledge Economy Index as *the absolute percentage change in jobs* in firms classified as sole proprietorships, between 1997 and 2000.

Statewide, the average percent change was 4.7%.

#### Legend (absolute change in jobs)

- Less than 5%
- 5 - 10 %
- 10 - 20%
- More than 20%

County totals of jobs in businesses classified as sole proprietorships were used to determine the net gain or loss of such jobs in each county. The change from 1997 to 2000 totals (gain or loss) was calculated as a percentage of the 1997 figure, and the absolute value of that change is represented in this indicator.

# MICHIGAN KNOWLEDGE ECONOMY INDEX

## Conclusion

The promise of technology to aid humankind in the securing of our basic needs and releasing us from the drudgery of meaningless toil has been the hope and aspiration of modern civilization. Evidence of our technological cleverness is pervasive in our daily lives, and our potential to actualize a civil society in which our economic and democratic prosperity are assured almost seems within our grasp.

Technology-led economic development offers great wealth generation potential for those individuals and communities who are creative, talented, have a modern IT infrastructure, and have the foresight to plan for the new economy. Many of these characteristics are present in “university towns” where public and private investments in knowledge generation and application have been a long-term priority. Communities with a research and development capacity will likely do relatively well in the knowledge, technology-led economy that is emerging globally. However, those communities that do not succeed as research and development or other high-knowledge centers will probably find themselves competing with the rest of the world to be the cheap labor pool of choice, and thus may join the widening disparity between winner and loser communities worldwide.

While Michigan has a number of public and private higher education/research institutions (depending on how one counts we estimate there are between 116-175 post K-12 education and research facilities throughout the state), many Michigan communities do not have this historic intellectual infrastructure. As a result, for many Michigan communities the strongest economic development opportunities in technology-led development will most likely be in the later phases of the innovation-commercialization continuum (see Figure 1).

Figure 1. The Innovation-Commercialization Continuum

For publicly funded technology-led economic development to have a broad economic impact beyond just creating a few highly-skilled, highly-paid jobs for professionals in gifted communities, economic development practitioners and public policy officials must have a basic grasp of the creative process that supports innovation and commercialization. This creative and commercialization process can be described as the innovation-commercialization continuum.

Current practice suggests that in the early phases of conceptualizing and prototyping an innovation, it is often critical for the “inventor” to be near a university/research institute where the necessary intellectual mass (human capital), technological infrastructure, financial capital, and creative environment are in place to support the incubation of a new idea/method. However,

once the innovation has been prototyped and is ready for commercialization, the routine production of the new “product” can conceivably occur anywhere that a labor force, transportation/information system, business environment, and community amenities are conducive to the production of that “product”. At this point in the continuum, Michigan incubated inventions can actually shop globally for a production home. It is a rather curious potential consequence of the technology-led innovation-commercialization continuum that a state or other public institution might make all the initial up-front investments in the innovative process only to see the “pay-offs” in terms of jobs go to other places.

Communities without a university or technology center can compete for the jobs related to technology in this and later phases of the product life-cycle. These communities must pursue strategies designed to enhance their competitive advantage in a technology driven economy and improve their features that would attract and develop industries in the knowledge economy. Communities with the desired infrastructure, labor pool, amenities, quality of life and other factors can compete for the high-skilled high-wage jobs in the knowledge economy.

### **Strategic Community and Economic Development Actions**

The selection of appropriate economic development strategies must be done in the context of your local situation. The unique social, economic, environmental, political, institutional, and individual character of a community will in a large part determine the “apply-ability” of each or any combination of these strategies. The following are potential strategic actions communities can pursue to enhance their competitive advantage in creating and retaining jobs in the globally competitive knowledge economy:

**Establish a shared vision:** Public/private partnerships that are committed to a shared community vision have the highest potential to succeed. Broad-based inclusive participation in establishing a set of shared objectives is critical to community mobilization and goal attainment. Work together to address your shared concerns. Identify key leaders who can “spread the word” on the challenges and opportunities for the community.

**Continuously develop your workforce:** The most critical resource in the knowledge economy is our human capital. A community that fails to educate and retrain its residents does so at its economic peril! Worker retraining, proactive lifelong learning, and an effective K-12 education system are basic elements of a globally competitive community economy.

**Analyze your current strengths and capacities:** An assessment of your current abilities and resources is an important first step in the community and economic development process. Business “Cluster analysis”, community resource and individual skill inventories and other asset based assessment methods are useful in targeting limited resources to actions that may have immediate and significant pay offs. The capacity for business innovation is often facilitated by industry “clusters”; these are broad network of producers, suppliers, and organizations that can bring new products to the market.

**Support creativity and entrepreneurship:** Sir Francis Bacon is credited with saying “If we are to achieve results never before accomplished, we must employ methods never before

attempted.” A new economy is based on new ideas! Support creativity in all its forms, support reasoned risk takers, create an environment that encourages the development and implementation of new ways of producing and distributing goods and services. Change is an important of the knowledge economy. Look for those who seek to innovate and support their creative endeavors where appropriate.

**Provide access to capital:** Access to venture, equity and debt capital are critical to the development and implementation of new enterprises. A community needs a broad set of financial resources to provide for the creation and development of new economic enterprises. Assess your current financial institutional capacity and mobilize to address gaps in your capital resources.

**Develop and maintain infrastructure:** The knowledge-based global economy requires both the traditional public works of the 20th century, roads, sewers, water etc. and a unique set of new infrastructure requirements. Access to the internet, and related telecommunications technologies are as essential to economic development as roads were in the mid-20th century. Assess your 21st century infrastructure capacity and invest strategically in those areas that are critical and underdeveloped.

**Promote quality of life:** Place is still critical in the global knowledge-based economy. Knowledge workers and knowledge based industries in considering location decisions consider the overall quality of life available in a community. Examine and promote your cultural and environmental amenities. Where necessary support the development of a diverse quality life that will attract high-skilled, high-paid workers. Place makes a difference – make your place different!

## Summary

The challenge confronting policy makers in pursuing a publicly funded technology-led economic development strategy, is to not only support the elusive creative process but to insure that the benefits (jobs/revenues) of that process accrue to those communities or public institutions that made the crucial investments in the first place. In an integrated global economy this is a particularly daunting task.

Private investors and higher education institutions often seek to secure, through patents and other property rights protections, some rate of return on their investment in innovation. There are few, if any, tools available to state and local governments to realize a reasonable rate of return on their public investments in technology-led economic development, particularly if after the incubation period and during the commercialization of the “product” the production moves to a foreign shore.

Technology-led economic development offers a great opportunity for economic growth and an improved quality of life for a few well-positioned communities. But for many others, isolated rural areas, abandoned or distressed urban/suburban neighborhoods, publicly supported technology-led economic development strategies raise a new set of challenges for practitioners and policymakers alike. As with the publicly funded economic development strategies of the past millennium, a new set of tools to enhance and secure an improved quality of life, particularly for distressed communities, needs to be developed and implemented. We owe it to ourselves, and our posterity, to seek out these tools and apply them appropriately.

## Adapting Planning Practice to the Knowledge Economy

### A Checklist of Possible Strategic Actions for Local Communities and Regions

#### Planning for Knowledge Jobs

- In the knowledge economy, an educated citizenry is critical to success. If a community does not get smarter it **will** get poorer.
- A community should provide educational opportunities across the life-span of the workforce.
- Begin with early childhood development with a seamless transition to k-12, higher education, career development and retraining programs.
- Establish a business/education roundtable as a regular forum for businesses to discuss education and training needs and for education to discuss program challenges, curriculum options and resources
- Develop "technology education centers" designed to train participants on relevant technologies of interest to the local community.
- Recapture high school graduates that leave the area for higher education through strategies such as forgiving student loans, promote local alumni networks, and welcome home events.

#### Planning for Innovation

- Establish a technology business incubator.
- Create flexible investment funds to make capital available to emerging enterprises/ technologies/entrepreneurs.
- Support and entrepreneurial environment that values risk takers and innovators.
- Provide broadband access.
- Host business/community "innovation fairs."
- Provide patent assistance.
- Establish links to higher education technology centers in your region to facilitate the location/expansion of innovative enterprises to your community.
- Establish a "speaker's bureau" of informed community leaders who can help spread the word on the global knowledge economy and its potential challenges and opportunities for your community.
- Create a "technical assistance network" that can provide low or no cost preliminary consultation to local businesses on incorporating technology within their enterprise.

## Planning for a Digital Economy

- Link homes, schools, businesses and government to the global internet and to each other.
- Create a community/business/government web presence.
- Provide broadband access where currently not available.
- Provide wireless access where appropriate.
- Provide non-formal adult education programs for residents on the global communications network.
- Map your community's global communications network.
- Use digital communications to support democratic governance in you community.
- Provide technical and financial assistance for residents and businesses to improve and expand their access to the digital economy.
- Require "open capacity" on any fiber optic infrastructure that is constructed, which may be used in the future to expand your e-commerce capacity.

## Planning for Globalization

- Facilitate export trade and global markets for existing products and services in your community (remember Canada is a Michigan neighbor)
- Identify existing exporting firms and identify related local industries that may also export to similar markets
- Consider attracting foreign based firms to your community in strategic and complementary industries
- Link to Michigan foreign trade zones.
- Identify and describe your community's global transportation capacity and share that with your local businesses.
- Identify and celebrate local ethnic/cultural heritages and explore possible international social capital opportunities.
- Conduct an "Industry Cluster Analysis" to assess possible global linkages and opportunities
- Organize and conduct training for key industry personnel and entrepreneurs on international trade and working in a culturally diverse economy

## Planning for Dynamism

- Establish effective communications amongst firms to **anticipate** change and develop responses.
- Supportive transition strategies for your community's workforce.
- Identify "new enterprises" in your community to assess potential emerging trends in your local economy.
- Implement "safety net" strategies for displaced workers and families to reduce personal stress and improve retention of skilled workers.
- Run business "birth announcements" in the local paper.
- Support strong entrepreneurial development programs to help new businesses form and expand locally.
- Provide access to a variety of types of capital for businesses.
- Build or rebuild "flexible space" environments that can be reused for a variety of production and services.
- Support local business incubator programs.
- Identify leakages in the local economy that may provide opportunities for business development.
- Examine alternative forms of business ownership in potential business closures.

# MICHIGAN KNOWLEDGE ECONOMY INDEX

## Worksheet

### To use this worksheet:

Use this worksheet to track your county's ranking for each indicator and index in the Michigan Knowledge Economy Index.

**First, complete the table to the right** with the rankings of each category and indicator for your county (rankings for each county are listed alphabetically in the Appendix).

### Next, ask yourself the following questions:

Which one or two rankings surprise you the most?

Which rankings most closely match your expectations?

Which indicators do you find the most meaningful?

Indicator	Rank
<b>Overall Index</b>	_____
<b>Knowledge Jobs</b>	_____
IT Jobs	_____
Workforce Education	_____
Management and Prof. Jobs	_____
<b>Digital Economy</b>	_____
Internet Use	_____
Digital Government	_____
Cable Modem Access	_____
<b>Innovation Capacity</b>	_____
High Tech Jobs	_____
Venture Capital	_____
Patents	_____
Engineers	_____
Bioscience Jobs	_____
<b>Globalization</b>	_____
Firms with Foreign Parents	_____
Exporting Firms	_____
<b>Economic Dynamism</b>	_____
Manufacturing Change	_____
Service Change	_____
Sole Proprietorship Change	_____
<b>Notes:</b>
